REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Koch et al. and McEwen et al. teach an ionic liquid electrolyte sandwiched between carbon cloth electrodes wherein the electrolyte contains salts consisting of alkyl substituted, cyclic delocalized aromatic cations, and their perfluoro derivatives, and certain polyatomic anions. McEwen et al. further discloses that these electrolytes can be used in batteries employing alkali and alkaline earth anode materials so long as the electrolyte contains the cation of the alkali or alkaline earth anode material.

Kobayashi et al. teach a positive electrode composed of a polymer of aniline or an aniline derivative (i.e. a conjugated polymer positive electrode), a negative electrode composed of an alkali metal, and an alkali metal salt electrolyte.

One skilled in the art would not be motivated to substitute the electrolyte of Kobayashi et al. with the electrolyte of Koch et al or McEwen et al. because neither Koch et al. nor McEwen et al. teach an ionic liquid electrolyte containing the cation of the alkali or alkaline earth anode material. (See also Applicants' Remarks on page13, filed 22 January 2004.)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
